

23rd January 2026

Dear Parents and Carers,

I am writing to inform you about a KS3 Science Revision Guide that is available for purchase via the Arbor app.

We strongly recommend the CGP Key Stage 3 Science: Higher Level – Complete Revision & Practice guide. This resource closely matches the curriculum your child is studying in class and is designed to help students consolidate their understanding of lesson content. This revision guide spans learning from year 7 through to year 9.

The revision guide will:

- Support students in understanding and completing homework tasks
- Reinforce key scientific knowledge and vocabulary taught in lessons
- Provide structured practice questions to check understanding
- Help students revise effectively for end-of-topic and end-point assessments
- Establish a strong foundation of scientific knowledge and skills that are essential for success at GCSE level

For the highest impact, your child should review the relevant sections at the front of the revision guide each week to consolidate their learning from their lessons. Then when an endpoint assessment draws near, they can use the workbook at the back to check their knowledge. If they discover a gap in their understanding they should go back to the pages at the front for support with that topic.

The concepts and skills developed during Key Stage 3 form the basis of GCSE Science, and this revision guide will help ensure students are well prepared as they progress into Key Stage 4.

The revision guide is currently £5.20 discounted from £6.50, however we do not know for how long. Please ensure payment is made through Arbor. Delivery of the revision guide is usually prompt and will be given to your child in lesson.

If you have any questions regarding this resource or the purchasing process, please do not hesitate to contact me.

Thank you for your continued support in your child's learning.

Yours sincerely,

J Smith
Science KS3 Lead
